

Tower Systems Safety Deck

A safe platform for fill pack

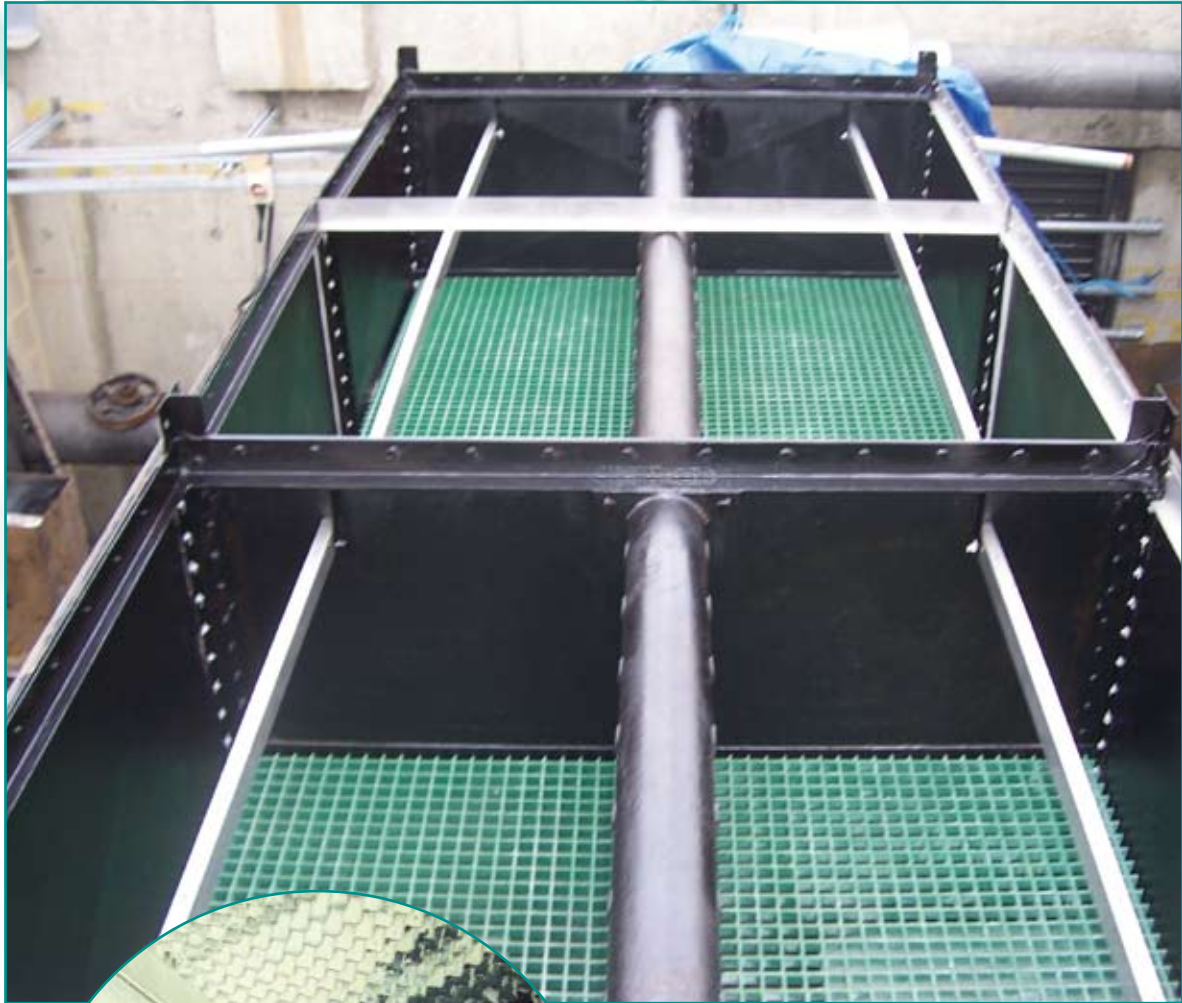

During maintenance activities operatives safety is of paramount importance. With Tower Systems Safety Deck, fill pack removal and inspection tasks are simplified while eliminating the risk of falling.

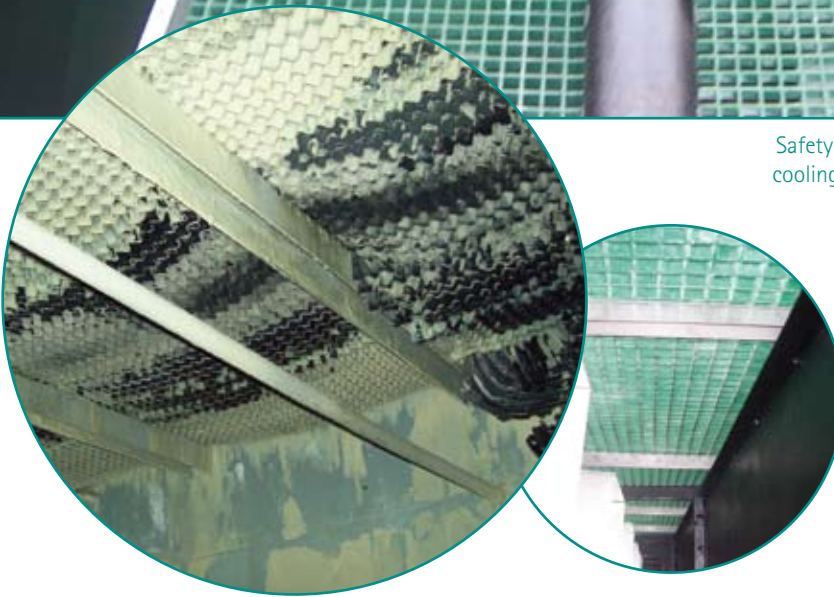

Our Safety Deck, which is placed permanently below the heat transfer packing, prevents operatives falling from height when the packing is removed during inspection, maintenance or replacement.

Aside from operatives safety, the Safety Deck also affords many other benefits:

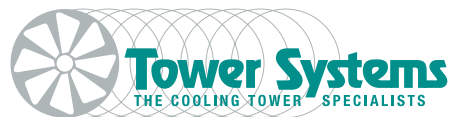

- Provides full support for the packing
- Allows safe and easy maintenance/removal of the packing, removing the need for scaffolding or boarding
- Corrosion free
- Non slip gritted upper surface
- Low maintenance
- Long life
- Strong and durable

Safety Deck installed in newly refurbished cooling tower prior to fill pack installation
